STANAG 4609 Transmitter

The STANAG 4609 transmitter is used to transmit video and metadata in a universal NATO standard accepted by all UAV monitoring and control.

Neuronics STANAG 4609 transmitter is integrated into the leading UAV systems and field proven with thousands of operational hours.

Neuronics STANAG Transmitter Key Features:

- Separated audio and metadata input
- Unified STANAG input
- H264 and H265 video input
- GeoRegistration enrichment
- Connection to ATR server for target recognition
- Supports NVIDIA Jetson platforms for small UAVs
- Optimized CPU/power consumption
- Flexible licensing model
