# STANAG 4609 Player

**The STANAG 4609** Player enables viewing and interaction with video and associated metadata streams and plays them on standard browser.
The Player shows the UAV status and gauges over the video.

## Neuronics WebRTC Player Key Features:

- Full STANAG 4609 input support

- Target detection and annotation - support of VMTI MISB 0601.X metadata video labeling

- Playback controls: video playback controls including play, pause, volume control, and full-screen mode

- Annotation and marking: ability to add annotations, markers and notes to specific parts in the video

- Communication - input of STANAG over UDP or RTP in unicast or multicast communication

- M19 Support – support of separate video and metadata streams or as a unified stream

- Option of metadata over WebSocket

- Video coding - supports H264 and H265 video as well as AV1 video compression

- Web-based option – option for web-based player without any installs
